

INTRODUCTION

We would like to take this opportunity to welcome you to our equine reproduction short course. As breeders ourselves, we appreciate the difficulties that can be faced when trying to run a successful breeding operation. Just understanding the basics of reproduction can be a daunting proposition, let alone trying to stay abreast of the latest technology and advancements in the field.

If you are a veterinarian, we recognise that you have the unenviable task of being expected to know what is available not only in the field of equine reproduction, but all other aspects of equine health and whatever other species of animals you treat. Because of recognising the difficulties involved with locating current, correct and practical information, we realised that there was a need for short courses, for not only veterinarians and reproduction specialists, but also for horse breeders.

If you are a breeder, we would like to encourage you to develop and cultivate a good working relationship with your veterinarian, which will be vital for your ongoing success. Much of the information contained in our short courses will enhance your equine reproduction knowledge, but it cannot replace your veterinarian.

As we spend the spring and summers practicing what is taught in the courses, we have the practical experience that we believe is important to teach you successfully. We also research ideas that we believe may be beneficial to the industry, as well as field test new products, and will only endorse those products which we have used and found to work well. We know the pitfalls, expenses and problems that are a part of breeding horses, and strive to present information that is current and cost effective. We are both published authors in multiple national magazines and firmly believe that the sharing of information with others can only be beneficial.

In Europe, the process of artificial insemination of the mare is considered a "veterinary procedure". This makes it illegal for the lay person to perform AI unless they fall under an exemption. Such an exemption is provided in the UK with "The Veterinary Surgery (Artificial Insemination) Order 2010". To obtain the exemption, one must have successfully completed an approved training course - such as the one which you are now attending - including the practical and theory examination, and must also comply with a minimum requirement for ongoing insemination procedures, which is currently 5 in each subsequent 2-year period (one can also have a veterinarian certify ongoing efficiency). It is your responsibility to ensure that you are cognizant of the requirements of the Order and remain in compliance. If you are exempted under the Order, we would recommend that you access the document on-line and review the wording.

We wish to continue to offer these courses and as you will appreciate, the organisational costs are significant. With that in mind, we would like to point out that these course notes are copyrighted, but that additional copies may be available for sale to those who attend the short courses. If you wish to give them to a friend or an associate, we would ask that you purchase an extra set and not duplicate them.

We are extremely grateful to the many persons that have provided us with graphics for use in the presentation, and are pleased to offer recognition to those people at the end of the presentations. Regrettably, as we do not own the copyright to these photos, we are unable to include them in the course notes.

Our website at www.equine-reproduction.com is the largest of its kind on the Internet and we are always happy to see you visit. We would also like to invite you to join the equine reproduction Facebook group, www.facebook.com/groups/EquineRepro/ which is moderated by us and is the largest Facebook group of its kind in the world. It gives breeders, veterinarians, researchers and repro specialists the unique opportunity to share information in the field of equine reproduction. To subscribe to this group, just visit the subscription page on our website or go to Facebook and search for EquineRepro.

We hope you enjoy the short course and if you find it beneficial and informative, please tell everyone that you know who may wish to attend a future course. If, however upon completion, you are not pleased with the information and material presented, please let us know how we can improve what we offer.

To make the course run a little more smoothly, we would like to request that you review and attend to the following items. We will mention this in the introduction, but in the

unfortunate event that you have missed it, there are a few points of which we would like to ensure you aware. Your compliance with these matters is appreciated.

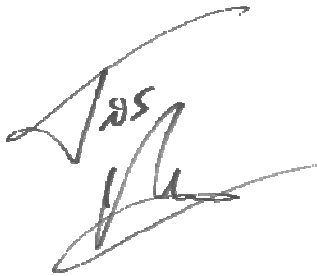

1. Please either turn your cell phone to “mute”, or turn it off. If someone is using a cell phone during the presentation, the presentation will be halted to assist you in completing your call. Other attendees however may not be so happy with that!

2. We will be covering a huge amount of information during the course. To achieve as much coverage as possible, there will be areas that are not covered in detail. Those areas will tend to be related to subject matter not in “daily use” in the field – a good example is that we cover mare hormones in detail, but stallion hormones very briefly. These notes do however carry more detailed review of all areas.

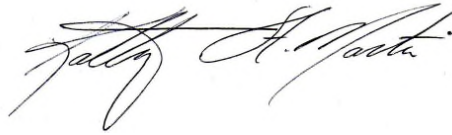

3. You will probably have questions! In fact, we consider that if you do not have questions, we may be doing something wrong! Because of the time constraints however, answering questions during the lecture portion can put us seriously behind schedule. We ask therefore that questions be asked during the breaks or during the wet lab portion only, when we will make ourselves available to answer questions.

4. We are not veterinarians; consequently, we are not legally permitted to answer specific questions about individual animals or cases, as that could be considered by some to be “practicing veterinary medicine without a licence”. We are happy to answer questions with generalities, but please respect this precarious situation in which we find ourselves – we want to assist you, but also want to remain available to assist others!

Thank you for attending and we look forward to hearing of your breeding successes in the future!

TABLE OF CONTENTS

INTRODUCTION	1
TABLE OF CONTENTS	3
MARES	7
TERMINOLOGY	7
REPRODUCTIVE STRUCTURE	7
<i>Internal Reproductive Tract</i>	7
ENDOCRINOLOGY	10
<i>Gonadotropin Releasing Hormone (GnRH)</i>	10
<i>Follicle stimulating hormone (FSH) and Luteinizing hormone (LH)</i>	11
<i>Oestrogens</i>	11
<i>Progesterone</i>	11
<i>Prostaglandin</i>	11
<i>Inhibin</i>	12
<i>A Brief Sequential Overview of the Regular Oestrous Cycle</i>	12
TRANSITIONAL PHASE	12
<i>Manipulation of Transitional Phase</i>	12
BREEDING PREPARATION	14
<i>Mare History</i>	14
<i>Nutritional Status and Housing</i>	15
<i>External Reproductive Conformation</i>	15
<i>Endometrial Swab, Cytology, Culture and Sensitivity</i>	16
<i>Endometrial Biopsy</i>	18
<i>Breeding to the EAV Positive Stallion</i>	20
<i>Breeding Soundness Examination – other</i>	20
MODIFICATION OF THE OESTROUS CYCLE USING HORMONES	21
<i>Induction of oestrus</i>	21
<i>Promotion of Ovulation</i>	23
<i>Ovarian Superstimulation (“Superovulation”)</i>	25
INDICATION OF OESTROUS STAGE	26
<i>External signs</i>	26
<i>Internal signs of oestrus</i>	26
<i>Determination of oestrus status</i>	26
BREEDING PROCESS	27
<i>Live Cover</i>	28
<i>Artificial Insemination</i>	29
<i>Low Sperm Dose Insemination</i>	33
<i>Multiple Pre-ovulatory Follicles Present – to breed or not?</i>	34
<i>“Foal heat” Breeding</i>	34
<i>Sex-selection Breeding</i>	35
BREEDING “PROBLEM” MARES	36
<i>Anoestrus</i>	36
<i>Chromosomal Abnormalities - “Intersex” Mares</i>	39
<i>Persistent Oestrus (Nymphomania)</i>	39
<i>Delayed Uterine Clearance</i>	39
<i>Endometritis</i>	41
<i>Sexually Transmitted Organisms</i>	44
<i>Intra-uterine irritant lavage</i>	45
<i>Urovagina (“Urine Pooling”)</i>	45
<i>Pneumouterus (“Windsucking”)</i>	46
<i>Developmental Abnormalities</i>	46
<i>Ovarian Abnormalities</i>	46
<i>Uterine Abnormalities</i>	48
<i>Hormonal Issues</i>	49
<i>Endophyte-infected Fescue Toxicity</i>	50
<i>Selenium Deficiency</i>	51
<i>Stallion Incompatibility</i>	51
<i>Reduced Immune Response</i>	51

BREEDING MYTHS.....	51
EARLY PREGNANCY	54
<i>Sperm Storage, Capacitation and Fertilisation</i>	54
<i>Endocrinology</i>	55
<i>Pregnancy Detection</i>	56
<i>Dealing with a Twin Pregnancy</i>	58
<i>Early Pregnancy Loss</i>	60
MID TO LATE PREGNANCY	63
<i>Nutrition</i>	63
<i>De-worming</i>	63
<i>Immunisation</i>	64
<i>Abortion</i>	65
<i>Other Pre-Foaling Problems</i>	68
PARTURITION (FOALING).....	70
<i>Assorted Foaling Equipment</i>	70
<i>Signs of Impending Parturition</i>	71
<i>Endocrinological changes</i>	72
EUTOCIA (NORMAL FOALING).....	73
<i>Stages of Eutocia</i>	73
<i>Immediate Care post-foaling</i>	74
INDUCTION OF PARTURITION	75
ABNORMAL FOALING	76
<i>Gestational Duration Description</i>	76
<i>Malpresentation (dystocia)</i>	77
<i>Premature Placental Separation</i>	78
<i>Recto-vaginal fistula</i>	78
<i>Foaling twins</i>	78
<i>Uterine inertia</i>	78
<i>Retained fetal membranes (placenta)</i>	78
<i>Uterine Artery Hemorrhage</i>	80
<i>Inversion of the Uterine Horn</i>	80
<i>Uterine Prolapse</i>	80
<i>Eversion of the urinary bladder</i>	81
<i>Other Apparent Abdominal Pain</i>	81
<i>Evidence of Post-Partum Depression</i>	81
<i>Post-Partum Constipation</i>	81
<i>Cervical Tears</i>	81
POST-FOALING.....	82
<i>Signs of a Healthy Foal</i>	82
<i>Subsequent Care</i>	82
<i>Colostrum</i>	82
<i>Passive Transfer</i>	83
<i>Failure of Passive Transfer</i>	83
NEONATE DANGER SIGNS.....	84
<i>Emergency Care</i>	84
<i>Immediate Attention Required</i>	86
<i>Important but not emergency (initially)</i>	91
ORPHAN FOALS	93
<i>Mare Euthanasiation</i>	93
<i>Definition of “orphan”</i>	95
<i>Rejection causes and attempting to remedy</i>	95
<i>Immediate Needs/Care</i>	95
<i>Breed-specific Genetic Defects</i>	96
STALLIONS.....	99
REPRODUCTIVE STRUCTURE.....	99
<i>External and Palpable Reproductive Conformation</i>	99
<i>Internal Reproductive Tract</i>	101
<i>Endocrinology</i>	101
<i>Sperm Production</i>	103
MANAGEMENT AND HANDLING.....	104

<i>Keeping the Stallion Healthy and Happy</i>	104
<i>Normal vs. Artificial Breeding Behaviour</i>	105
<i>Single-trial avoidance learning</i>	106
<i>Factors affecting stallion libido</i>	106
<i>The Successful Stallion Handler</i>	107
<i>Restraint Methods</i>	107
PRE-BREEDING.....	109
<i>Age-related Issues</i>	109
<i>Pre-Breeding Season Examination</i>	109
<i>Pre-breeding Washing</i>	111
LIVE COVER BREEDING.....	112
<i>The Breeding Shed/Location Layout</i>	112
<i>Breeding Shed Crew</i>	112
<i>Live Cover Protocol</i>	113
<i>When Things Go Wrong</i>	114
<i>Pasture Breeding</i>	114
SEMEN COLLECTION - EQUIPMENT.....	115
<i>Design of the Breeding Mount (“Phantom” or “Dummy”)</i>	115
<i>Cooled Semen Shipping Containers</i>	115
<i>Artificial Vagina and Associated Equipment</i>	116
<i>AV Preparation and Care</i>	117
LAB EQUIPMENT.....	118
<i>Semen Extenders</i>	121
DIFFERENT TECHNIQUES OF SEMEN COLLECTION.....	123
<i>Using a Live Mare</i>	123
<i>Breeding Mount (“Phantom” or “Dummy”) Collection</i>	123
<i>Ground Collection</i>	124
<i>Chemical Ejaculation</i>	126
<i>Live Cover Using a Stallion Condom</i>	126
EJACULATE EVALUATION AND PROCESSING.....	126
<i>Handling of Semen</i>	126
<i>Initial Evaluation</i>	127
<i>Microscopic Evaluation</i>	127
<i>Intermediate Evaluation</i>	129
<i>Advanced Evaluation</i>	130
<i>Calculation of On-Farm Insemination or Shipping Dose</i>	131
<i>Packaging Cooled Semen</i>	133
<i>Frozen Semen</i>	134
DEALING WITH THE PROBLEM STALLION.....	138
<i>Poor Quality Semen</i>	138
<i>Low Libido</i>	140
<i>“High” Libido</i>	141
<i>Ejaculatory Dysfunction</i>	141
<i>Cryptorchidism</i>	142
<i>Testicular Degeneration</i>	143
DISEASES.....	143
<i>Bacterial</i>	143
<i>Viral</i>	144
<i>Protozoa</i>	145
<i>Squamous Cell Carcinoma</i>	145
<i>Habronemiasis (summer sores)</i>	145
INJURIES.....	146
OTHER PHYSICAL CONDITIONS.....	146
<i>Scrotal Hernias</i>	146
<i>Testicular Torsion</i>	146
<i>Effusions of the Vaginal Cavity</i>	147
